

## Reducing emissions and saving fuel made easy

Contributed by Charl Hoole  
Monday, 05 January 2009

{pp}With the crisis of global warming, more needs to be done to protect the environment, on a personal level and a corporate level. Everyone uses fuel, in one way or another. The burning of fossil fuels is one of the biggest contributors to global warming because of all the carbon dioxide emissions.

We have the solution: VMT Fuel Additive.

VMT is a state-of-the-art combustion enhancer based on Nano Technology. The product contains no harmful or solid substances that can cause any detrimental side effect and is completely soluble in all type of fuels - diesel and petrol. Although fuel is a complex product containing hundreds of different chemicals, it is not designed to fully vaporize which in turn prohibits complete combustion, due to the presence of either ethanol (alcohol) and / or water.

These chemicals/contaminants interfere with good combustion and result in bad fuel consumption, excessive emissions, bad performance, engine wear etc.

Due to the high surface tension of conventional fuels it impairs the crucial vaporization process, which is of paramount importance for efficient combustion. The unique characteristics of VMT ensure full vaporization by breaking the surface tension of the fuel, which allows more complete burning. This phenomenon widens the limits of the combustibility of fuels which improve fuel consumption and significantly reduce emissions.

The Nano Technology of VMT does not interfere with the basic fuel characteristics except that it operates on the unburned portion of the fuel through better vaporization to improve combustion efficiency. The product is also SABS tested and approved to SANS 342 (Report: 2112/N4048/08/PT, dated 03rd June 2008).

### CUSTOMER BENEFITS

1. Improves Combustion Efficiency
2. Improves Thermal efficiency on all engines
3. Increases Horse Power
4. Cooler running engine
5. Improves fuel consumption drastically
6. Substantially reduces emissions
7. Prolong engine life
8. Reduces engine wear &ndash; due to no more unburned fuel passing the rings
9. Reduce formation of sludge in engine oil.
10. Catalytic converters to become obsolete.

### APPLICATIONS

- All petrol and diesel vehicles
- Marine engines
- Construction Equipment
- Agricultural Equipment and Tractors
- Mining Engines and Equipment
- Motorboats

Only a small amount of VMT is required. Best results are achieved when 2ml VMT is added to 1lt of fuel (Diesel or Petrol).

We can show you how much money you can save by using the product. The savings are most noticeable with an increasing number of vehicles in your fleet. We also have applicators to fit to vehicles to easily and automatically apply the correct amount of VMT needed when you fill up. These applicators are professionally installed and can either be purchased or financed. Contact Information:
